

Wireless VoIP – Wideband sound

The Jabra GN9330 Headset is among the first wireless office headsets to offer true wideband audio. VoIP has never sounded this good. Nor has it been this easy to set up and use.

Wireless VoIP – Wideband Sound

The Jabra GN9330 wireless headset significantly enhances the user's experience with Toshiba DKT/IPT phones.

The Jabra GN9330 wireless headset has an audio bandwidth of 6.8 kHz, which is more than twice that of conventional telephony. Not only does this give users the feeling of a true "face-to-face" conversation, it also helps increase productivity because all details are heard the first time. Noise-canceling microphone technology ensures clear voice transmission, no matter where the user is in the office. And due to digital encryption, conversation security is guaranteed.

Simplicity with Impact

The Jabra GN9330 headset connects quickly and effortlessly to a computer. Intuitive headset controls make it easy to operate, and at less than an ounce, users will forget they are even wearing it. With a range of up to 200 feet, the Jabra GN9330 headset makes it possible to

take calls throughout an office. And with 6 hours of talk time — and around-the-clock talk time with optional, hot-swappable interchangeable battery — a day's business can be conducted without recharging. The Jabra GN9330 headset allows users to escape the limitations of their workstation, providing hands-free convenience, all-day comfort, and superb sound clarity.

Remote Answering Capability

An electronic hook switch (EHS) enables you to answer and end calls, while you are away from your desk phone. Without it, you would have to hurry to your desk and use the handset when you take a call or hang up. And that kind of reduces the benefits of having a wireless headset in the first place, doesn't it?

Fortunately, Toshiba has incorporated EHS technology into their phones, which is supported by all Jabra EHS headsets. From the simple answering and ending of calls to volume control. All quite convenient, when you are away from your desk.

Plug and play

The Jabra GN9330 headset works exceptionally with Toshiba phones without the need for additional software, including drivers. Just plug the headset into the PC USB port.
