The St. Andrews Cathedral Broadcasts with their new HD-TV system using 4 remote controlled pan/tilt/zoom cameras. The entire production is performed live via the control room editing suite and linked via micro-wave transmission to the TV station. The HD broadcast system can transmit 720p or 1080i. resolutions. A webstream station provides internet viewing.

A new sound system was included using special “steerable” speaker systems. These speakers blend with the architecture and are not affected by long reverberation times. The sound system can be set for manual or automatic mode.
